40V Precision Low Power Operational Amplifiers

FN6632  
Rev 12.00  
March 30, 2016

The [ISL28117](#), [ISL28217](#), [ISL28417](#) and [ISL28417SEH](#) are a family of very high precision amplifiers featuring low noise vs power consumption, low offset voltage, low bias current and low temperature drift making them the ideal choice for applications requiring both high DC accuracy and AC performance. The combination of precision, low noise and small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for these amplifiers include precision active filters, medical and analytical instrumentation, precision power supply controls and industrial controls.

The ISL28117 single and ISL28217 dual are offered in 8 Ld SOIC, MSOP and TDFN packages. The ISL28417 is offered in 14 Ld SOIC, 14 Ld TSSOP packages. All devices are offered in standard pin configurations and operate over the extended temperature range from -40°C to +125°C.

The ISL28417SEH is offered in a 14 Ld Hermetic Ceramic Flatpack package. The device is offered in an industry standard pin configuration and operates over the extended temperature range from -55°C to +125°C.

- [AN1509](#) "ISL282X7SOICEVAL2Z Evaluation Board User's Guide"

**Features**

- Low input offset voltage .....  $\pm 50\mu\text{V}$ , maximum  
ISL28417SEH  $\pm 110\mu\text{V}$ , maximum
- Superb offset voltage TC .....  $0.6\mu\text{V}/^\circ\text{C}$ , maximum  
ISL28417SEH  $1\mu\text{V}/^\circ\text{C}$ , maximum
- Input bias current .....  $\pm 1\text{nA}$ , maximum  
ISL28417SEH  $\pm 5\text{nA}$ , maximum
- Input bias current TC .....  $\pm 5\text{pA}/^\circ\text{C}$ , maximum
- Low current consumption .....  $440\mu\text{A}$
- Voltage noise .....  $8\text{nV}/\text{Hz}$
- Wide supply range .....  $4.5\text{V}$  to  $40\text{V}$
- Operating temperature range .....  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$   
ISL28417SEH  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$
- Small package offerings in single, dual and quad
- Pb-free (RoHS compliant)
- No phase reversal

**Applications**

- Precision instruments
- Medical instrumentation
- Power supply control
- Active filter blocks
- Thermocouples and RTD reference buffers
- Data acquisition

### NOTES:

- Add "-T13" suffix for 2.5k unit, "-T7" suffix for 1k, "-T7A" suffix for 250 unit Tape and Reel options. Please refer to [TB347](#) for details on reel specifications.
- Add "-T13" suffix for 6k unit, "-T7" suffix for 1k, "-T7A" suffix for 250 unit Tape and Reel options. Please refer to [TB347](#) for details on reel specifications.
- Add "-T13" suffix for 2.5k unit, "-T7" suffix for 1.5k, "-T7A" suffix for 250 unit Tape and Reel options. Please refer to [TB347](#) for details on reel specifications.
- These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- These Intersil Pb-free Hermetic packaged products employ 100% Au plate - e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations.
- For Moisture Sensitivity Level (MSL), please see device information page for [ISL28117](#), [ISL28217](#), [ISL28417](#). For more information on MSL please see techbrief [TB363](#).

-	-	14	V <sub>OUT_D</sub>		
1, 5, 8	-	-	NC	-	No internal connection
PD	PD	-	PD	-	Thermal Pad - TDFN package only. Connect thermal pad to ground or most negative potential.

## Absolute Maximum Ratings

Maximum Supply Voltage	42V
Maximum Supply Voltage ISL28417SEH (Note 13)	40V
Maximum Differential Input Current	20mA
Maximum Differential Input Voltage	42V
Maximum Differential Input Voltage (ISL28417SEH)	20V
Min/Max Input Voltage	V- - 0.5V to V+ + 0.5V
Max/Min Input Current for Input Voltage >V+ or <V-	±20mA
Output Short-Circuit Duration (1 output at a time)	Indefinite
ESD Rating	
Human Body Model	
ISL28117, ISL28417	6kV
ISL28217	4.5kV
ISL28217 MSOP	5.5kV
ISL28417SEH	2kV
Charged Device Model	
ISL28117, ISL28217	1.5kV
ISL28217 (MSOP), ISL28417	2kV
ISL28417SEH	1kV
Machine Model	
ISL28117, ISL28217 (MSOP)	300V
ISL28217	500V
ISL28417, ISL28417SEH	450V

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

### NOTES:

- $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief [TB379](#).
- For  $\theta_{JC}$ , the "case temp" location is the center of the exposed metal pad on the package underside.
- For  $\theta_{JC}$ , the "case temp" location is taken at the package top center.
- $\theta_{JA}$  is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- For  $\theta_{JC}$ , the "case temp" location is the center of the ceramic on the package underside.
- No destructive single-event effects at effective LET of  $73.9\text{MeV} \cdot \text{cm}^2/\text{mg}$  up to a supply of  $\pm 20\text{V}$ . Reference manufacturers SEE report.

## Thermal Information

## Applications Information

### Functional Description

The ISL28117, ISL28217, ISL28417 and ISL28417SEH are single, dual and quad, low noise precision op amps. Both devices are fabricated in a new precision 40V complementary bipolar DI process. A super-beta NPN input stage with input bias current cancellation provides low input bias current (180pA typical), low input offset voltage (13 $\mu$ V typical), low input noise voltage (8nV/ $\sqrt{\text{Hz}}$ ) and low 1/f noise corner frequency (~8Hz). These amplifiers also feature high open loop gain (18kV/mV) for excellent CMRR (145dB) and THD+N performance (0.0005% at 3.5V<sub>RMS</sub>, 1kHz into 2k $\Omega$ ). A complimentary bipolar output stage enables high capacitive load drive without external compensation.

### Operating Voltage Range

The devices are designed to operate over the 4.5V ( $\pm 2.25$ V) to 40V ( $\pm 20$ V) range and are fully characterized at 10V ( $\pm 5$ V) and 30V ( $\pm 15$ V). The Power Supply Rejection Ratio typically exceeds 140dB over the full operating voltage range and 120dB minimum over the -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range. The worst case common-mode input voltage range over-temperature is 2V to each rail. With  $\pm 15$ V supplies, CMRR performance is typically >130dB over-temperature. The minimum CMRR performance over the -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range is >120dB for power supply voltages from  $\pm 5$ V (10V) to  $\pm 15$ V (30V).

### Input Performance

The super-beta NPN input pair provides excellent frequency response while maintaining high input precision. High NPN beta (>1000) reduces input bias current while maintaining good frequency response, low input bias current and low noise. Input bias cancellation circuits provide additional bias current reduction to <1nA and excellent temperature stabilization. [Figures 11](#) through [18](#) show the high degree of bias current stability at  $\pm 5$ V and  $\pm 15$ V supplies that is maintained across the -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range. The low bias current TC also produces very low input offset current TC, which reduces DC input offset errors in precision, high impedance amplifiers.

The +25 $^{\circ}$ C maximum input offset voltage ( $V_{OS}$ ) for the "B" grade is 50 $\mu$ V and 100 $\mu$ V for the "C" grade. Input offset voltage temperature coefficients ( $V_{OSTC}$ ) are a maximum of  $\pm 0.6\mu\text{V}/^{\circ}\text{C}$  for the "B" and  $\pm 0.9\mu\text{V}/^{\circ}\text{C}$  for the "C" grade. [Figures 3](#) through [6](#) show the typical gaussian-like distribution over the  $\pm 5$ V to  $\pm 15$ V supply range and over the full temperature range. The  $V_{OS}$  temperature behavior is smooth ([Figures 7](#) through [10](#)) maintaining constant TC across the entire temperature range.

### Input ESD Diode Protection

The input terminals (IN+ and IN-) have internal ESD protection diodes to the positive and negative supply rails, series connected 500 $\Omega$  current limiting resistors and an anti-parallel diode pair across the inputs ([Figure 54](#)).

FIGURE 54. INPUT ESD DIODE CURRENT LIMITING- UNITY GAIN

The series resistors limit the high feed-through currents that can occur in pulse applications when the input  $dv/dt$  exceeds the 0.5V/ $\mu$ s slew rate of the amplifier. Without the series resistors, the input can forward-bias the anti-parallel diodes causing current to flow to the output resulting in severe distortion and possible diode failure. [Figure 48](#) provides an example of distortion free large signal response using a 4V<sub>p,p</sub> input pulse with an input rise time of <1ns. The series resistors enable the input differential voltage to be equal to the maximum power supply voltage (40V) without damage.

In applications where one or both amplifier input terminals are at risk of exposure to high voltages beyond the power supply rails, current limiting resistors may be needed at the input terminal to limit the current through the power supply ESD diodes to 20mA maximum.

### Output Current Limiting

The output current is internally limited to approximately  $\pm 45$ mA at +25 $^{\circ}$ C and can withstand a short-circuit to either rail as long as the power dissipation limits are not exceeded. This applies to only 1 amplifier at a time for the dual op amp. Continuous operation under these conditions may degrade long term reliability. [Figures 27](#) and [28](#) show the current limit variation with temperature.

### Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28117, ISL28217, ISL28417 and ISL28417SEH are immune to output phase reversal, even when the input voltage is 1V beyond the supplies.

### Unused Channels

The user must configure unused channel(s) to prevent them from oscillating. The unused channel(s) oscillates if the input and output pins are floating. This results in higher than expected supply currents and possible noise injection into the other channel(s) being used. The proper way to prevent this oscillation is to short the output to the inverting input and ground the positive input, as shown in [Figure 55](#).

FIGURE 55. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

## Power Dissipation

It is possible to exceed the +150°C maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature ( $T_{JMAX}$ ) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using [Equation 1](#):

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

Where:

- $PD_{MAXTOTAL}$  is the sum of the maximum power dissipation of each amplifier in the package ( $PD_{MAX}$ )
- $PD_{MAX}$  for each amplifier can be calculated using [Equation 2](#):

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

Where:

- $T_{MAX}$  = Maximum ambient temperature
- $\theta_{JA}$  = Thermal resistance of the package
- $PD_{MAX}$  = Maximum power dissipation of 1 amplifier
- $V_S$  = Total supply voltage
- $I_{qMAX}$  = Maximum quiescent supply current of 1 amplifier
- $V_{OUTMAX}$  = Maximum output voltage swing of the application

## ISL28117, ISL28217, ISL28417, ISL28417SEH SPICE Model

[Figure 56](#) shows the SPICE model schematic and [Figure 57](#) shows the net list for the ISL28117, ISL28217, ISL28417 and ISL28417SEH SPICE model for a Grade “B” part. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: 1/f and flatband noise, Slew Rate, CMRR, Gain and Phase. The DC parameters are VOS, IOS, total supply current and output voltage swing. The model uses typical parameters given in the “Electrical Specifications” table beginning on [page 7](#). The AVOL is adjusted for 155dB with the dominant pole at 0.02Hz. The CMRR is set (210dB,  $f_{cm} = 10\text{Hz}$ ). The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of +25°C.

[Figures 58](#) through [68](#) show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Closed Loop Gain vs  $R_L$ , Large Signal Step Response, Open Loop Gain Phase and Simulated CMRR vs Frequency.

DATE	REVISION	CHANGE
March 30, 2016	FN6632.12	Removed Note that references SMD for the ISL28417SEH from ordering information table on page 3 and removed ISL28417SEH from MSL note due to not applicable.
March 16, 2016	FN6632.11	-Added the ISL28417SEH throughout the datasheet. -Updated POD L8.3x3k to most recent revision with change as follows: Tiebar Note 5 updated From: Tiebar shown (if present) is a non-functional feature. To: Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends). -Added about Intersil verbiage -Electrical Specifications Table Title on page 7: Added ISL28117, ISL28217, ISL28417 (VS ± 15V). -Electrical Specifications Table Title on page 9: Added ISL28117, ISL28217, ISL28417 (VS ± 5V).
September 11, 2012	FN6632.10	Feature on page 1: Added No phase reversal. Removed from ordering information QFN parts ISL28417FRZ (not release part) on Page 3. Removed all instances of QFN through document (front page, table of contents, thermal information, pin description and POD). Added to the typical performance curves table figure 53 on page 22: <b>Common-mode input impedance.</b>
February 23, 2012	FN6632.9	<p>"Ordering Information" on page 2: Removed "Coming soon" from ISL28417FVZ and changed Part Marking column from "28417 FVZ" to "28417 FVZ-C". Changed "-40 to +125" to "200 C-grade" Added new Part Number ISL28417 FVBZ Electrical Spec changes: VOS Description Section: page 7 &amp; page 9: Changed "Input Offset Voltage; SOIC Package" to Input Offset Voltage; SOIC, TSSOP Package" TCVOS Description section: page 7 &amp; page 9: Changed; Input Offset Voltage Temperature Coefficient; SOIC Package to Input Offset Voltage Temperature Coefficient; SOIC, TSSOP Package TCIOS Conditions section: page 7 &amp; page 9: Changed "ISL28417 SOIC B and C Grade" to "ISL28417 SOIC, TSSOP B and C Grade".</p> <p>"Ordering Information" on page 3: Updated Pkg. Dwg. # for ISL28117FUBZ, ISL28117FUZ, ISL28217FUBZ &amp; ISL28217FUZ from M8.118 to M8.118B Updated Pkg. Dwg. # for ISL28117FRTBZ, ISL28117FRTZ, ISL28217FRTBZ &amp; ISL28217FRTZ from L8.3x3A to L8.3x3K Updated Pkg. Dwg. # for ISL28417FRZ from L16.4x4 to L16.4x4E "Thermal Information" on page 6: Added <math>\Theta_{JA}</math> and <math>\Theta_{JC}</math> for 16 Ld QFN and 14 Ld TSSOP Figure 52, "% OVERSHOOT vs LOAD CAPACITANCE, <math>V_S = \pm 15V</math>" on page 22: X-Axis (Capacitance pF) values 1k and 10k were shifted 1 decade to the right. Shifted 1 decade to the left and added new label "100k" at the extreme right (where the "10k" value was located). Added dual and quad to the "SPICE NET LIST" on page 26. "Package Outline Drawing" on page 35: Changed from M8.118 to M8.118B Top View: Package width &amp; height changed from 3.0±0.05 to 3.0±0.1 Package height from lead to lead changed from 4.9±0.15 to 4.9±0.2 Side View 2: Lead thickness changed from 0.09-0.20 to 0.15±0.05mm Side View 1: Package height changed from 0.85±0.10 to 0.86±0.05 Changed lead width from 0.25-0.036 to 0.23-0.36 Detail X: Foot of lead length changed from 0.55±0.15 to 0.53±0.10 "Package Outline Drawing" on page 36: Changed from L8.3x3A to L8.3x3K Bottom View: Changed lead height from 0.3±0.1 to 0.4±0.05 Changed lead width from 0.30±0.05 to 0.25±0.05 Land Pattern: Changed lead width from 0.30 to 0.25</p>

Please go to web to make sure you have the latest Rev. **(Continued)**

DATE	REVISION	CHANGE
August 31, 2010	FN6632.5	<p>1. General changes:</p> <p>a. Added in Quad devices to the datasheet for SOIC, TSSOP and QFN packages.</p> <p>b. Added in TDFN packages for single and dual devices.</p> <p>c. Added in new VOS and TCVO limits for TDFN packages</p> <p>d. Added Tja and Tjc Notes for TDFN Package which are "direct attach (Tja) " and "bottom (Tjc)"</p> <p>2. Specific changes:</p> <p>a. Added in ISL28417 to title and front page info on page 1</p> <p>b. Added in ISL28117FRTZ, ISL28117FRTBZ, ISL28217FRTZ, ISL28217FRTBZ, ISL28417FBZ, ISL28417FVZ and ISL28417FRZ packages to Ordering information on page 3 and page 3. Added in -T7 and -T7A tape and reel extensions where applicable.</p> <p>c. Added in TDFN, 14 Ld SOIC, 14 Ld TSSOP and 16 Ld QFN to pin configurations on page 4 and page 3.</p> <p>d. Updated Pin Descriptions tables with new added in packages on page 5.</p> <p>e. Abs Max Table added in thermal packaging info for TDFN packages on page 6.</p> <p>f. Electrical Specifications Table - Added two new line items for VOS spec. TDFN package ISL28217 Grade B limits <math>\pm 70\mu\text{V}</math> 25C and <math>\pm 140\mu\text{V}</math> full temp. TDFN package ISL28x17 Grade C limits <math>\pm 150\mu\text{V}</math> 25C and <math>\pm 250\mu\text{V}</math> full temp on page 7 and page 9.</p> <p>g. Electrical Specifications Table - Added two new line items for TCVO spec. TDFN package ISL28217 Grade B limits <math>\pm 0.7\mu\text{V}/\text{C}</math> full temp. TDFN package ISL28x17 Grade C limits <math>\pm 1\mu\text{V}/\text{C}</math> on page 7 and page 9.</p> <p>h. Added in PODs for L8.3x3A, M14.15, M14.173 and L16.4x4</p>
March 18, 2010	FN6632.4	<p>1. Updated "Ordering Information" on page 3 by adding two rows for MSOP packages ISL28117FUBZ and ISL28117FUZ, which are scheduled to release Q2 2010. Added Pinout accordingly.</p> <p>2. Added POD for MSOP M8.118 to the end of datasheet</p> <p>3. In "Ordering Information" on page 3, Separated each part number with it's own specific -T7 and -T13 suffix and removed "Add "-T7" or "-T13" suffix for Tape and Reel." from Note 1.</p> <p>4. Updated <math>\pm 15</math> and <math>\pm 5\text{V}</math> Electrical Specification table with the following edits:</p> <p>A) Separated VOS specs for SOIC and MSOP Grade C packages. Added new VOS specs for MSOP Grade C package.</p> <p>B) Separated TCVO specs for SOIC and MSOP Grade C packages. Added new TCVO specs for MSOP Grade C package.</p> <p>5. Added "Thermal Information" on page 6 for ISL28117 MSOP package.</p> <p>Added page1.</p> <p>Added Evaluation Boards to "Ordering Information" on page 3.</p> <p>Added Theta JC values to "Thermal Information" on page 6. Added applicable Theta JC Note 7.</p> <p>Updated Theta JA for ISL28217 8 Ld SOIC from <math>115^\circ\text{C}/\text{W}</math> to <math>105^\circ\text{C}/\text{W}</math>.</p> <p>Part marking in "Ordering Information" on page 3 changed as follows:</p> <p>ISL28117FBBZ changed from "28117 FBZ -B" to "28117 FBZ"</p> <p>ISL28117FBZ changed from "28117 FBZ" to "28117 FBZ -C"</p> <p>ISL28217FBBZ changed from "28217 FBZ -B" to "28217 FBZ"</p> <p>ISL28217FBZ changed from "28217 FBZ" to "28217 FBZ -C"</p> <p>On page 14: Changed label in Figure 3 from "<math>V_S = +5\text{V}</math>" to "<math>V_S = \pm 5\text{V}</math>"</p> <p>On page 14: Changed label in Figure 4 from "<math>V_S = +15\text{V}</math>" to "<math>V_S = \pm 15\text{V}</math>"</p> <p>Changed Typical VOS spec from "13" to "8" (B Grade), "19" to "4" (C Grade), IB from "0.18" to "0.08, IOS from "0.3" to "0.08". Edited Spice Schematic - L1 from "95.4957" to "15.9159E", R1 from "6k" to 1, R9 from "1" to "2.1E3", R10 from "1" to "2.1E3, R12 from "6k" to "1", L2 from "95.4957" to "15.9159E". Edited Spice Net List - Changed Revision from "A" to "B", Date change from "October 29th 2009" to "November 20th 2009", added after AOL "SR = 0.5V/<math>\mu\text{sec}</math>, Input Stage changed in I_IOS from "0.3E-9" to 0.08E-9, V_VOS "13e-6" to "8e-6", Mid supply Ref R_R9 and R_R10 changed "1" to "2.1E3", Common-Mode Gain Stage with Zero change in G_G5 and G_G6 "5.27046e-15" to "3.162277", R_R11 and R_R12 "6.3" to "1", L_L1 and L_L2 "95.4957" to "15.9159E-3"</p>
November 12, 2009	FN6632.3	Updated Typical Performance Curves Figure 5, 7, 9, 11, 13, 15, 17 and 19. Added Spice Model and license statement. Replaced typical application schematic.

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev. (Continued)

DATE	REVISION	CHANGE
October 16, 2009	FN6632.2	On page 3 "Ordering Information", changed the following: a) corrected part marking for ISL28117FBBZ from "28117 -B FBZ" to "28117 FBZ -B". Corrected part marking for ISL28217FBBZ from "28217-B FBZ" to "28217 FBZ -B" B) Updated package outline drawing to most recent revision (no changes were made to package dimensions; land pattern was added and dimensions were moved from table onto drawing) c) Added "Add "-T7" or "-T13" suffix for tape and reel." to the tape and reel Note 1. d) added Note 3 callout to all parts (Note 3 reads: "For Moisture Sensitivity Level (MSL), please see device information page for ISL28117, ISL28217. For more information on MSL please see techbrief TB363.") e) removed "Coming Soon" from ISL28117FBBZ, ISL28117FBZ & ISL28217FBBZ devices
October 8, 2009	FN6632.1	<ol style="list-style-type: none"> <li>1. Removed "very" from "...low noise.." 1st sentence, page 1.</li> <li>2. Removed "Low" from 6th bullet under features, page 1.</li> <li>3. Modified typical characteristics curves to show conservative performance. Specific channel designations removed. On temperature curves, changed formatting to indicate range from typical value. Changes include:               <ol style="list-style-type: none"> <li>a. Removed former Figures 1, 3, 5, 7, 9, 10, 13, 14, 17, 18, 21, 22, 25, 26, 29, 30, 33, 34, 37 &amp; 38 (all Channel A curves)</li> <li>b. Replaced former Figures 19, 20, 23, 24, 27, 28, 31, 32, 35, 36, 39 &amp; 40 with new Figures 9 thru 20 (all "conservative channels")</li> <li>c. Added Figures 30, 31, 32</li> </ol> </li> <li>4. Updated TCvos histogram on page 1 to match TCvos histogram Figure 6 on page 7 (same graphic)</li> <li>5. Added temp labels to Figures 28 &amp; 29</li> </ol>
September 3, 2009	FN6632.0	Initial Release

## About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at [www.intersil.com](http://www.intersil.com).

You may report errors or suggestions for improving this datasheet by visiting [www.intersil.com/ask](http://www.intersil.com/ask).

Reliability reports are also available from our website at [www.intersil.com/support](http://www.intersil.com/support).

© Copyright Intersil Americas LLC 2009-2016. All Rights Reserved.  
 All trademarks and registered trademarks are the property of their respective owners.

For additional products, see [www.intersil.com/en/products.html](http://www.intersil.com/en/products.html)

Intersil products are manufactured, assembled and tested utilizing ISO9001 quality systems as noted in the quality certifications found at [www.intersil.com/en/support/qualandreliability.html](http://www.intersil.com/en/support/qualandreliability.html)

*Intersil products are sold by description only. Intersil may modify the circuit design and/or specifications of products at any time without notice, provided that such modification does not, in Intersil's sole judgment, affect the form, fit or function of the product. Accordingly, the reader is cautioned to verify that datasheets are current before placing orders. Information furnished by Intersil is believed to be accurate and reliable. However, no responsibility is assumed by Intersil or its subsidiaries for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Intersil or its subsidiaries.*

For information regarding Intersil Corporation and its products, see [www.intersil.com](http://www.intersil.com)

# Package Outline Drawing

## M8.15E

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

**NOTES:**

1. Dimensions are in millimeters.  
Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension does not include interlead flash or protrusions.  
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.

# Package Outline Drawing

## M8.118B

### 8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE

Rev 1, 3/12

**NOTES:**

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSEY14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.15mm max per side are not included.
5. Dimensions are measured at Datum Plane "H".
6. Dimensions in ( ) are for reference only.

# Package Outline Drawing

L8.3x3K

8 LEAD THIN DUAL FLAT NO-LEAD PLASTIC PACKAGE

Rev 2, 5/15

- NOTES:**
1. Dimensions are in millimeters.  
Dimensions in ( ) for Reference Only.
  2. Dimensioning and tolerancing conform to ASME Y14.5m-1994.
  3. Unless otherwise specified, tolerance : Decimal ± 0.05
  4. Dimension applies to the metallized terminal and is measured between 0.15mm and 0.20mm from the terminal tip.
  5. Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends).
  6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
  7. Compliant to JEDEC MO-229 WEEC-2 except for the foot length.

**NOTES:**

1. Plastic or metal protrusions of 0.006" maximum per side are not included.
2. Plastic interlead protrusions of 0.010" maximum per side are not included.
3. Dimensions "D" and "E1" are measured at Datum Plane "H".
4. Dimensioning and tolerancing per ASME Y14.5M-1994

# Package Outline Drawing

## M14.173

14 LEAD THIN SHRINK SMALL OUTLINE PACKAGE (TSSOP)

Rev 3, 10/09

NOTES:

1. Dimension does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15 per side.
2. Dimension does not include interlead flash or protrusion. Interlead flash or protrusion shall not exceed 0.25 per side.
3. Dimensions are measured at datum plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.
5. Dimension does not include dambar protrusion. Allowable protrusion shall be 0.80mm total in excess of dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm.
6. Dimension in ( ) are for reference only.
7. Conforms to JEDEC MO-153, variation AB-1.

Rev. 0 5/18/94

**NOTES:**

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark. Alternately, a tab (dimension k) may be used to identify pin one.
2. If a pin one identification mark is used in addition to a tab, the limits of dimension k do not apply.
3. This dimension allows for off-center lid, meniscus, and glass overrun.
4. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
5. N is the maximum number of terminal positions.
6. Measure dimension S1 at all four corners.
7. For bottom-brazed lead packages, no organic or polymeric materials shall be molded to the bottom of the package to cover the leads.
8. Dimension Q shall be measured at the point of exit (beyond the meniscus) of the lead from the body. Dimension Q minimum shall be reduced by 0.0015 inch (0.038mm) maximum when solder dip lead finish is applied.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.
