PCB Power Relay

Impulse Withstand Voltage as High as 10kV with 4kV Dielectric Strength: Ideal for Power Supply Switching

- Input and output (between coil and contacts) are completely separated, with impulse withstand voltage of 10,000 V.
- . Insulation distance of 8 mm min. between coil and contacts satisfies the VDE Standard C/250 insulation requirements, and conforms to Electrical Appliance and Material Safety Law with dielectric strength of 4,000 VAC min. Standard model conforms to UL/CSA standards.
- VDE standard approved models are also available. Consult your Omron sales representative for availability.
- SPST-NO (1a) types conform to TV-8 rating, and DPST-NO (2a) types conform to TV-5 rating.
- Full-wave bridge rectifier compatible models are also available.

5% to 85%

The insulation resistance was measured with a 500 VDC Megger Tester applied to the same parts as those for checking the dielectric strength. This value was measured at a switching frequency of 120 operations/min.

Note: The above values are initial values. *1. The contact resistance was measured with 1 A at 5 VDC with a fall-of-potential method.

G4W

Precautions

● Please refer to "PCB Relays Common Precautions" for correct use.

Correct Use

Mounting

- When mounting more than two Relays on a PCB, keep the gap as shown in the following figure.
- No specified mounting direction.
- Not compatible with sockets.

• There is the current-carrying metal part on the coil terminal. Do not mount to the PCB with

patterned metal surface.

G

4 W

Other Precautions

 This Relay is suitable for power load switching of motors, transformers, solenoids, lamps, heaters, etc. Do not use the G4W to switch micro loads less than 100 mA, such as in signal applications.

Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product. Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

Note: Do not use this document to operate the Unit.
