description

The SN74GTL2006 is a 13-bit translator to interface between the 3.3-V LVTTL chipset I/O and the Xeon™ processor GTL-/GTL/GTL+ I/O. The device is designed for platform health management in dual-processor applications.

PIN DESCRIPTION

PIN NUMBER	SYMBOL	NAME AND FUNCTION
1	V_{REF}	GTL reference voltage
2–6, 8, 10–13, 15	nAn	Data inputs/outputs (LVTTL)
7, 9, 16, 17–27	nBn	Data inputs/outputs (GTL−/GTL/GTL+)
14	GND	Ground (0 V)
28	V_{CC}	Positive supply voltage

Current into any output in the HIGH state, A port . . . . . −32 mA
Storage temperature range, T_{stg} . . . . . −60 to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

‡ Voltages are referenced to GND (ground = 0 V).

NOTES: 1. The performance capability of a high-performance integrated circuit, in conjunction with its thermal environment, can create junction temperatures that are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.
2. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

frequently asked questions

Question 1: On SN74GTL2006 LVTTL inputs, specifically 10AI1 and 10AI2, when the device is powered down, these inputs may be pulled up to 3.3 V, and we want to ensure that there is no leakage path to the power rail under this condition. Are the LVTTL inputs high impedance when the device is powered down, and will there be any leakage?

Answer 1: When the device is powered down, the LVTTL inputs are in a high-impedance state and do not leak to V_{DD} if they are pulled high while the device is powered down.

Question 2: Do all the LVTTL inputs have the same powered-down characteristic?

Answer 2: Yes

Question 3: What is the condition of the other GTL I/O and LVTTL output pins when the device is powered down?

Answer 3: The open-drain outputs, both GTL and LVTTL, do not leak to the power supply if they are pulled high while the device is powered down. The GTL inputs also do not leak to the power supply under the same conditions. The LVTTL totem-pole outputs, however, are not open-drain type outputs, and there will be current flow on these pins if they are pulled high when V_{DD} is at ground.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
