

SN54HC194, SN74HC194 4-BIT BIDIRECTIONAL UNIVERSAL SHIFT REGISTERS

D2684, DECEMBER 1982—REVISED JUNE 1989

- Parallel Inputs and Outputs
- Four Operating Modes:
Synchronous Parallel Load
Right Shift
Left Shift
Do Nothing
- Positive Edge-Triggered Clocking
- Direct Overriding Clear
- Package Options: Plastic and Ceramic DIPs and Ceramic Chip Carriers
- Dependable Texas Instruments Quality and Reliability

description

These bidirectional shift registers are designed to incorporate virtually all of the features a system designer may want in a shift register. The circuit features parallel inputs, parallel outputs, right-shift and left-shift inputs, operating-mode-control inputs, and a direct overriding clear line. The register has four distinct modes of operation, namely:

- Parallel (broadside) load
- Shift right (in the direction Q_A toward Q_D)
- Shift left (in the direction Q_D toward Q_A)
- Inhibit clocking (do nothing).

Synchronous parallel loading is accomplished by applying the 4 bits of data and taking both mode control inputs, S_0 and S_1 , high. The data are loaded into the associated flip-flops and appear at the outputs after the positive transition of the clock input. During loading, serial data flow is inhibited.

Shift right is accomplished synchronously with the rising edge of the clock pulse when S_0 is high and S_1 is low. Serial data for this mode is entered at the shift-right data input. When S_0 is low and S_1 is high, data shifts left synchronously, and new data is entered at the shift-left serial input.

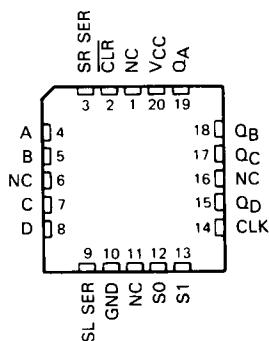

Clocking of the shift register is inhibited when both mode control inputs are low.

The SN54HC194 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HC194 is characterized for operation from -40°C to 85°C .

4-BIT BIDIRECTIONAL UNIVERSAL SHIFT REGISTERS

absolute maximum ratings over operating free-air temperature range†

Supply voltage, V_{CC}	-0.5 V to 7 V
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$)	± 20 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)	± 20 mA
Continuous output current, I_O ($V_O = 0$ to V_{CC})	± 25 mA
Continuous current through V_{CC} or GND pins	± 50 mA
Lead temperature 1,6 mm (1/16 in) from case for 60 s: FK or J package	300 °C
Lead temperature 1,6 mm (1/16 in) from case for 10 s: N package	260 °C
Storage temperature range	-65 °C to 150 °C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
