

Color Sensor IC Series

# Digital 16bit Serial Output Type Color Sensor IC

## BU27006MUC-Z

### General Description

BU27006MUC-Z is a digital color sensor IC with Flicker sensing function. This IC senses Red, Green, Blue (RGB) and Infrared and converts them to digital values. The high sensitivity, wide dynamic range and excellent Ircut characteristics make it possible for this IC to obtain the accurate illuminance and color temperature of ambient light. It is also possible to detect flicker light noise of display and room lighting. It is ideal for adjusting LCD backlight of TV, mobile phone and tablet PC.

### Features

- RGB/IR + Flicker Detection
- Built-in Ircut Filter
- Rejecting 50 Hz/60 Hz Light Noise for Color Sensor
- I<sup>2</sup>C Bus Interface (f/s mode support)
- Correspond to 1.8 V Logic Interface
- LUX Resolution 0.015 lx/count (Typ) in Color Sensor (In the highest gain and the longest measurement time setting)
- Sampling frequency 1 kHz/2 kHz is selectable in flicker sensor

### Key Specifications

- VCC Voltage Range: 1.7 V to 3.6 V
- LUX and CCT Detection Range<sup>(Note 1)</sup>: 50 klx (Typ)
- Flicker Detection Range<sup>(Note 1)</sup>: 10 klx (Typ)
- Current Consumption<sup>(Note 1)</sup>:
  - Color Sensing: 220 μA (Typ)
  - Flicker Sensing: 200 μA (Typ)
- Power Down Current: 2 μA (Typ)
- Operating Temperature Range: -40 °C to +85 °C  
*(Note 1) White LED is used.*

### Package

WQFN12X2520A

### W (Typ) x D (Typ) x H (Max)

2.50 mm x 2.00 mm x 0.55 mm

### Applications

Mobile Phone, Tablet PC, Notebook PC, Digital Camera, Portable Game Machine, LCD TV

### Typical Application Circuits

○Product structure: Silicon integrated circuit  
 ○This product does not include laser transmitter.  
 ○This product includes Photo detector, (Photo Diode) inside of it.

○This product has no designed protection against radioactive rays.  
 ○This product does not include optical load.

**Electrical Characteristics**

(Unless otherwise specified, V<sub>CC</sub> = 1.8 V, Ta = 25 °C, RGB\_GAIN = x32 gain mode, MEAS\_MODE = 100 ms mode, FLC\_GAIN = x32 gain mode, FLC\_MODE = 2 kHz mode)

Parameter	Symbol	Min	Typ	Max	Unit	Conditions
Current Consumption 1	I <sub>CC1</sub>	-	220	310	μA	Ev = 300 lx <sup>(Note 1)</sup> RGB_EN = '1', FLC_EN = '0'
Current Consumption 2	I <sub>CC2</sub>	-	200	280	μA	Ev = 300 lx <sup>(Note 1)</sup> RGB_EN = '0', FLC_EN = '1'
Power Down Current	I <sub>CC3</sub>	-	2	5	μA	No input light RGB_EN = '0', FLC_EN = '0' SCL = SDA = 1.8 V <sup>(Note 2)</sup>
Red Data Count Value	D <sub>RED</sub>	2040	2400	2760	count	Ev = 20 μW/cm <sup>2</sup> <sup>(Note 3)</sup>
Green Data Count Value	D <sub>GREEN</sub>	2975	3500	4025	count	Ev = 20 μW/cm <sup>2</sup> <sup>(Note 4)</sup>
Blue Data Count Value	D <sub>BLUE</sub>	1785	2100	2415	count	Ev = 20 μW/cm <sup>2</sup> <sup>(Note 5)</sup>
IR Data Count Value	D <sub>IR</sub>	560	750	940	count	Ev = 20 μW/cm <sup>2</sup> <sup>(Note 6)</sup>
Flicker Data Count Value	D <sub>FLICKER</sub>	370	500	630	count	Ev = 300 lx <sup>(Note 1)</sup>
RGB/IR Dark Count Value	S <sub>0_0</sub>	-	-	2	count	No input light
FLICKER Dark Count Value	S <sub>F_0</sub>	-	-	5	count	No input light
RGB/IR Measurement Time	t <sub>MT</sub>	-	-	100	ms	
FLICKER Measurement Time	t <sub>FLC</sub>	475	500	525	μs	
INT Output 'L' Voltage	V <sub>INTL</sub>	0	-	0.4	V	I <sub>OL</sub> = 3 mA
SCL SDA Input 'H' Voltage	V <sub>IH</sub>	0.84	-	-	V	
SCL SDA Input 'L' Voltage	V <sub>IL</sub>	-	-	0.45	V	
SDA Output 'L' Voltage	V <sub>OL</sub>	0	-	0.4	V	I <sub>OL</sub> = 3 mA

(Note 1) White LED is used.  
 (Note 2) Current value depends on the voltage difference between the VCC pin and the SCL or SDA pins.  
 (Note 3) Red LED is used.  
 (Note 4) Green LED is used.  
 (Note 5) Blue LED is used.  
 (Note 6) Infrared LED is used.

**Typical Performance Curves**

Figure 1. RGB/IR Sensitivity Ratio vs Wavelength (RGB/IR Spectral Response)

Figure 2. FLICKER Sensitivity Ratio vs Wavelength (FLICKER Spectral Response)

I<sup>2</sup>C Bus Timing Characteristics (Unless otherwise specified V<sub>CC</sub> = 1.8 V, Ta = 25 °C)

Parameter	Symbol	Min	Typ	Max	Unit
SCL Clock Frequency	f <sub>SCL</sub>	0	-	400	kHz
'L' Period of the SCL Clock	t <sub>LOW</sub>	1.3	-	-	μs
'H' Period of the SCL Clock	t <sub>HIGH</sub>	0.6	-	-	μs
Setup Time for Repeated START	t <sub>SU,STA</sub>	0.6	-	-	μs
Hold Time for START	t <sub>HD,STA</sub>	0.6	-	-	μs
Data Setup Time	t <sub>SU,DAT</sub>	100	-	-	ns
Data Hold Time	t <sub>HD,DAT</sub>	0	-	-	μs
Setup Time for STOP	t <sub>SU,STO</sub>	0.6	-	-	μs
Bus Free Time between STOP and START	t <sub>BUF</sub>	1.3	-	-	μs

I<sup>2</sup>C Bus Communication

1. Write Format

(1) Indicate register address

(2) Write data after indicating register address

2. Read Format

(1) Read data after indicating register address

(2) Read data from the specified register

: from master to slave       : from slave to master

## Register MAP - continued

## (0x41) MODE\_CONTROL1

Fields	Function
RGB_GAIN	Gain setting for RGB/IR Data. 00: x1 gain mode 01: x4 gain mode 10: x32 gain mode 11: x128 gain mode
MEAS_MODE	Measurement mode for RGB/IR Data 00: Forbidden to use 01: 55 ms mode 10: 100 ms mode 11: Forbidden to use Measurement time is specified in Electrical Characteristics.

Default value 0x02

MEAS\_MODE: When measurement mode is 55ms and RGB\_GAIN is x1 or x32, maximum output of RED\_DATA is 0xC800.

## (0x42) MODE\_CONTROL2

Fields	Function
FLC_GAIN	Gain setting for FLICKER sensor 000: x1 gain mode 001: x2 gain mode 010: x4 gain mode 011: x8 gain mode 100: x16 gain mode 101: x32 gain mode 110: Forbidden to use 111: Forbidden to use
FLC_MODE	Measurement mode for FLICKER Data 0: 1 kHz mode 1: 2 kHz mode

Default value 0x00

## (0x43) MODE\_CONTROL3

Fields	Function
RGB_VALID	Refer to "VALID Register"
FLC_VALID	Refer to "VALID Register"
INT_SEL	00: Disable 01: Measurement completion of RGB/IR data 10: Measurement completion of FLICKER data 11: 64 DATAs are ready in FIFO.
RGB_EN	0: RGB/IR measurement is inactive. 1: RGB/IR measurement is active.
FLC_EN	0: Flicker measurement is inactive. 1: Flicker measurement is active.

Default value 0x00

## (0x50 / 0x51) RED\_DATA

Fields	Function
RED_DATA [15:0]	RED measurement result

Default value 0x0000

## (0x52 / 0x53) GREEN\_DATA

Fields	Function
GREEN_DATA [15:0]	GREEN measurement result

Default value 0x0000

**Power Supply Sequence (Unless otherwise specified  $V_{CC} = 1.8\text{ V}$ ,  $T_a = 25\text{ }^\circ\text{C}$ )**

Parameter	Symbol	Min	Typ	Max	Unit	Conditions
Command Input Wait Time after Power-up	$t_{PSC}$	100	-	-	$\mu\text{s}$	
Power Down Time	$t_{PSL}$	1	-	-	ms	

Command input is available after “ $t_{PSC}$ ” from  $V_{CC}$  is supplied.  
 If  $V_{CC}$  voltage is below the recommended operating voltage range, internal state is “Undefined Behavior”. In this case, please once power down and power up again.  
 Keep  $V_{CC} < 0.4\text{ V}$  for “ $t_{PSL}$ ” or more before  $V_{CC}$  is supplied again.

**Optical Design for the Device**

I/O Equivalence Circuits

Pin Name	Equivalent Circuit	Pin Name	Equivalent Circuit
SCL		SDA	
INT		-	-

## Operational Notes

### 1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

### 2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

### 3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

### 4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

### 5. Recommended Operating Conditions

The function and operation of the IC are guaranteed within the range specified by the recommended operating conditions. The characteristic values are guaranteed only under the conditions of each item specified by the electrical characteristics.

### 6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

### 7. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

### 8. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

### 9. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

### 10. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

### 11. Ceramic Capacitor

When using a ceramic capacitor, determine a capacitance value considering the change of capacitance with temperature and the decrease in nominal capacitance due to DC bias and others.

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipment (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.) ; or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

### Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

### Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

### Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

### Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

### Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

### Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

### Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

### Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.
