ADDITIONNAL INFORMATION ON LED COMPONENTS

• Bi-color leds, by connecting the gold faston (+) one color is produced, by reversing the supply voltage another color is produced – bi-colors are available up to 28 VDC

• The tri-color led has red and green leds when both are connected yellow is produced.

• The operating voltage must not be exceeded by more that 10% as this will result in reduced life expectancy

• Luminous intensity is measured at 20 mA on a discrete led unless otherwise stated.

• Luminous intensities and color shades of white LEDs may vary within a batch.

• Luminous intensity will be reduced with lower operating current.

ABOUT THIS SERIES

Notice: please note that not all combinations of above numbers are available.

• Gold faston terminal denotes anode (+), silver terminal denotes cathode (-)

• Standard wire length is 200 mm, 22 AWG UL1007, red wire denotes anode (+), black wire denotes cathode (-) for other wire lengths consult APEM

• Take care when soldering to the faston terminals (recommended solder temperature 300 °C - 3 sec)

• Short body pins and wires are only available up to 28 VDC

• Standard tri-color faston terminals are two anodes (+) and one cathode (-)

• Tri-color wires are one red (+) and one green (+) anode and one black (-) cathode

• Tri-color pins are center (–) cathode, shortest (+) anode pin green, longest (+) anode pin red

• We recommend using hyperbright or superbright leds for use at 110 VAC and 220 VAC

• For leds with alternative voltages and for multi-voltage options please consult APEM
