# Intelligent Power Module (IPM), 600 V, 10 A

## STK544UC63K-E

The STK544UC63K-E is a fully-integrated inverter power stage consisting of a high-voltage driver, six IGBT's and a thermistor, suitable for driving permanent magnet synchronous (PMSM) motors, brushless-DC (BLDC) motors and AC asynchronous motors. The IGBT's are configured in a 3-phase bridge with separate emitter connections for the lower legs for maximum flexibility in the choice of control algorithm. The power stage has a full range of protection functions including cross-conduction protection, external shutdown and under-voltage lockout functions. An internal comparator and reference connected to the over-current protection circuit allows the designer to set the over-current protection level.

NOTES:

7. This section of the timing diagram shows the effect of cross-conduction prevention.
8. This section of the timing diagram shows that when the voltage on  $V_{DD}$  decreases sufficiently all gate output signals will go low, switching off all six IGBTs. When the voltage on  $V_{DD}$  rises sufficiently, normal operation will resume.
9. This section shows that when the bootstrap voltage on  $VB(U)$  ( $VB(V)$ ,  $VB(W)$ ) drops, the corresponding high side output U (V, W) is switched off. When the voltage on  $VB(U)$  ( $VB(V)$ ,  $VB(W)$ ) rises sufficiently, normal operation will resume.
10. This section shows that when the voltage on ITRIP exceeds the threshold, all IGBT's are turned off. Normal operation resumes later after the over-current condition is removed.
